WORK EXPERIENCE

Avorino

March 2025 – Present

Associate Developer

- Sole developer of the company's marketing website, built and shipped end-to-end in Next.js/TypeScript on Cloudflare Workers across a three-repo stack (web app, API, dashboard) — a luxury construction/ADU brand experience featuring scroll-driven GSAP animations, Three.js 3D scenes, and Lenis smooth scrolling.
- Designed and built a customizable ADU cost-estimation tool powered by Google Gemini that computes project costs from size, room count, finish level, and location-specific pricing multipliers, then gates the itemized breakdown behind contact capture to convert estimator traffic into qualified leads.
- Engineered the end-to-end lead-generation funnel — multi-step form wizards, exit-intent capture, A/B-tested landing pages, and click-to-call CTAs — instrumented with Google Ads conversion tracking (gclid attribution, Enhanced Conversions, and offline-conversion exports) that ties ad spend directly to captured leads.
- Built a programmatic local-SEO system spanning 37 Orange County cities (~150 pages, ~1,800 CMS entries) with per-city ADU permit intelligence, structured-data/schema markup, and an automated Google Search Console indexing pipeline; added a Gemini-powered broken-link outreach tool for backlink acquisition.
- Shipped first-party analytics — engaged-time tracking and visitor/session journey attribution — surfaced through an internal CRM and dashboard, plus an automated daily performance report emailed to leadership.
- Built an automated SMS-based time-tracking system for field crews: clock-in/out through the web app with JustCall-API reminders and break tracking, now used daily by Avorino's construction workers.

USA Wholesale Supplies

June 2025 – July 2026

Junior Web Developer: Part-Time

- Core developer on a 4-engineer team building UW Portal, a wholesale operations platform (Next.js/TypeScript front end + Express/Supabase API), delivering end-to-end inventory and product-lifecycle management — Product Received → Approval → Allocation → Shipment — with CRUD, auto-generated tracking codes, cascade record handling, and ExcelJS import/export.
- Designed and shipped a full role-based access control (RBAC) system across the stack: a roles-and-permissions management UI, permission-enforcement middleware guarding every protected API route, and backend-driven permission gates that hide or disable UI actions per user's role.
- Scaled the data-heavy inventory tables with server-driven infinite scrolling backed by PostgreSQL index tuning for pagination and ILIKE search plus backend-aligned sorting, replacing slow full-table loads with smooth, consistent paging.
- Built the portal's advanced data-table UX — column-filter dropdowns, freeze-pane sticky columns, batch actions, responsive layouts, and full dark-mode support — plus a Recharts metrics dashboard with user-configurable preferences.
- Led development of the USA Wholesale Staff Portal (React/Vite + Express/Supabase) for attendance and payroll: timezone-correct time tracking, timesheet submission/locking by cutoff period, and an automated invoicing flow that generates invoices on submission with employee acknowledge/reject, hourly-vs-fixed pay types, and PDF export — with access rules enforced at the database via Supabase Row-Level Security.

Hooli Software

November 2024 – February 2025

Software Engineer Intern

- Collaborated within Agile and Scrum environments to drive enhancements in both frontend and backend components of a SaaS product, contributing to overall system stability and user experience improvements.
- Proactively identified and resolved performance and integration challenges through code refactoring and continuous feedback, streamlining workflows and ensuring consistent application functionality.

NOTABLE PROJECTS

Avorino

2026

<https://avorino.com/>

- Sole developer of the full marketing site and its growth-engineering stack: a Gemini-powered ADU cost estimator, a programmatic local-SEO system across 37 cities, a conversion-optimized lead funnel with Google Ads attribution, and first-party analytics feeding an internal CRM.

- Next.js, React, TypeScript, Tailwind CSS, Shadcn/ui, Google Gemini AI, GSAP, Three.js, Framer Motion, Recharts, React Hook Form, Zod, Drizzle ORM, PostgreSQL, Cloudflare Workers

Nexwin Capital

2026

<https://nexwincapital.com/>

- Sole developer of a lead-generation marketing site and admin CRM for a California loan-broker, spanning a public Next.js site, a Bun/Hono API, and a dashboard — including a full lead pipeline (intake forms, gclid-based Google Ads conversion attribution) and first-party analytics with visitor-journey tracking.
- Implemented per-program PPC landing pages driven by a custom CMS, SEO structured data (LoanOrCredit / OfferCatalog / HowTo / BlogPosting schema + RSS), and Google-required financial-product compliance disclosures.
- Next.js, React, TypeScript, Tailwind CSS, Shadcn/ui, GSAP, Three.js, Lenis, Motion, Bun, Hono, Drizzle ORM, PostgreSQL, Zod, Cloudflare Workers, Cloudflare R2, JustCall API

Geotime

2026

- Implemented key features for an employee time tracking platform, including automated SMS-based reminders for clock-in/clock-out functionality using JustCall API, and break tracking.
- Next.js, React, TypeScript, Tailwind CSS, Shadcn/ui, TanStack Query, Bun, Drizzle ORM, JustCall API, Cloudflare Workers

KKB (Kanya-Kanyang-Bayad)

2026

<https://kkb-three.vercel.app/>

- Built a full-featured bill-splitting web app with Next.js (App Router), TypeScript, and Tailwind CSS v4, implementing multiple split modes, per-person cost breakdowns, extra-fee handling, and payment-status tracking through a modular architecture of 20+ React components and reusable custom hooks (useBillState, useBillCalculations, useSavedGroups) backed by a client-side calculation engine and localStorage persistence — no backend required.
- Designed a cohesive neobrutalism design system with a custom shadcn/ui component library (Button, Card, Input), light/dark theme toggle, and shareable bill links with QR-code generation, delivering a bold, high-contrast, fully responsive UI that lets users split, save, and share group expenses in seconds.

EDUCATION

Holy Angel University

Bachelor of Science in Computer Engineering

July 2021 – April 2025

Angeles City, Pampanga

CERTIFICATIONS, SKILLS & INTERESTS

- **CompTIA IT Fundamentals (ITF+)** **November 24, 2023**
- **Skills:** Proficient in fast-paced environments with strong coding and problem-solving skills and computer hardware expertise, complemented by good communication abilities; also possess knowledge in networking and logic circuits.
- **Interests:** I enjoy video essays that explore complex topics through engaging storytelling. I'm passionate about problem-solving in programming using my own solutions and love tinkering with computer hardware.
